

# Thyroid Fine Needle Aspiration

Yale Medicine's Pathology Labs cytopathology service is uniquely qualified to interpret thyroid fine needle aspiration biopsies. With seven board-certified cytopathologists, we process and evaluate more than 3,000 thyroid FNA's annually. Our lab offers a broad test menu and cutting-edge technologies to help streamline accurate reporting with timely results. Physicians, clinicians and patients can rely on one point-of-contact for information throughout the specimen examination and testing process.

## Laboratory Benefits

- Accurate reporting using the latest NCI Bethesda Thyroid FNA Reporting System
- Excellent cytologic-histologic correlation
- Molecular testing for BRAF mutations
- Thyrosure NGS
- Access to view cases remotely

## Superior Customer Service

- Timely and accurate results
- Online ordering and access to results using the RELAY web portal
- EMR interface with Information Technology support
- Dedicated Physician Liaison assigned to your account

---

**Yale Pathology Labs leads the industry. We receive over 1,000 referrals each year from physicians worldwide.**
