

Gynecological Pathology

Yale Medicine's Pathology Labs cytopathology service is uniquely qualified to interpret all gynecological cytology cases. With seven board-certified cytopathologists, we process and evaluate more than 80,000 gynecological cases annually. Our team of highly trained specialists can manage high-volume, complex neoplastic surgical specimens and biopsies. Our lab offers a broad test menu and cutting-edge technologies to help streamline accurate reporting with timely results. Physicians, clinicians, and patients can rely on one point-of-contact for information throughout the specimen examination and testing process.

Laboratory Benefits

- Process both FDA-approved liquid-based cytology products (ThinPrep and SurePath)
- Accurate imaging using the latest technology for Pap smear screening (FocalPoint GS and ThinPrep Imager)
- Real-time cytologic-histologic correlation
- Molecular testing from liquid-based Pap preparation for HPV (high-risk and genotyping), chlamydia, and gonorrhea
- BD Affirm testing for candida species, trichomonas, and gardnerella
- HSV I/II/VZV testing from BD cervical swap
- GBS testing

Superior Customer Service

- Timely and accurate results
- Online ordering and access to results using the RELAY web portal
- EMR Interface with Information Technology support
- Customized patient letters for Pap results, appointment and wellness reminders
- Dedicated Physician Liaison assigned to your account
